

## MPLS Solutions enable ARRK Europe to connect securely between locations

European product development specialist ARRK Europe Ltd has selected national internet service provider WarwickNet to deploy Multiprotocol Label Switching (MPLS) solutions across its seven locations throughout the UK.

Employing a workforce of more than 2,000 across the UK, Europe and Scandinavia, ARRK depends on the ability to receive customer data electronically, share files and information between sites, and run their back office systems and so a safe, fast and reliable internet service is paramount.

Mark Davison, Senior Business Development Manager at WarwickNet, said:

*"When working with organisations such as ARRK, it's extremely important that we provide a wide breadth of services which allow highly efficient network routing between sites, flexibility and security."*

Connecting the sites in Nuneaton, Petersfield, Gloucester, Teesside and Essex with a combination of MPLS, Internet breakout and VoIP, as well as a managed firewall for remote connectivity, WarwickNet has catered for the European business network's every need.

Kay Phillips, Group IT Manager at ARRK Europe Ltd, said:

*"WarwickNet has been outstanding in everything from the approachability, skill and responsiveness of the sales and technical teams, through to the solution design, seamless implementation and ongoing support."*

*"Compared to our previous supplier, the service is cheaper, more reliable and provides an all-around better service – I wish we had moved years ago."*

The ARRK Europe Ltd project requires high engineering standards, including:

- High-quality national MPLS network
- Business-grade broadband and leased lines
- VoIP telephony services
- Managed Firewall
- High-speed Internet Access

Whether you have just a handful of offices or hundreds of premises that need connecting, get in touch today for industry leading networking expertise and proven track record in designing, delivering and maintaining data networks of the highest quality.
